

Cable tray surface-mounted accessories

Overview

Choose from our selection of cable trays, including over 850 products in a wide range of styles and sizes. Same and Next Day Delivery.

Key Takeaways

Surface-mounted cable tray accessories include brackets, hangers, connectors, and grounding components that ensure secure, organized, and safe cable management. Key Types of Surface-Mounted Accessories

1. Brackets and Supports

- Wall-mounted supports: Provide stability for horizontal or vertical cable tray runs along walls, ensuring easy maintenance and secure installation .
 - Ceiling suspension frames: Used for small or large cable trays, often combined with threaded rods and crossbars to suspend trays from ceilings .
 - Hangers and clamps: Attach trays to threaded rods or strut channels, supporting horizontal runs and preventing sagging .
- #### 2. Connectors and Couplers
- Straight connectors: Join two tray sections in a line.
 - Tees, crosses, and elbows: Facilitate directional changes in cable routing.
 - Clamp connectors: Securely fasten trays and accessories, maintaining system continuity .
- #### 3. Fasteners and Hardware

- Bolts, nuts, and washers: Ensure secure fixation of wall-mounted or floor-mounted supports. Special washers with teeth improve electrical conductivity for grounding .
 - Threaded rods and expansion components: Connect ceiling supports and allow adjustable suspension heights .
- #### 4. Grounding and Safety Accessories
- Special conductors: Provide safe grounding, prevent static, EMI, and electric shock, often with corrosion-resistant, flame-retardant PVC sheaths .
 - Grounding washers: Pierce oxide coatings to enhance conductivity at grounding points .
- #### 5. Cable Protection Add-Ons
- Drop-outs and plastic clips: Relieve stress on cables as they exit trays and prevent damage without bending wires .
 - Covers for ladder or ventilated trays: Protect cables from dust, water, and falling objects while maintaining ventilation .
- #### Material and Installation Considerations
- Accessories are typically made from steel, stainless steel, or corrosion-resistant materials to ensure durability in industrial environments .
 - Selection depends on tray type (solid-bottom, ventilated, ladder) and load requirements, with heavy-duty, medium-duty, or light-duty options available .
 - Proper spacing of supports (e.g., every 6–8 feet) is critical to maintain structural integrity and prevent sagging .

Summary

Surface-mounted cable tray accessories are essential for structural support, cable organization, and safety. They include brackets, hangers, connectors, fasteners, grounding components, and protective add-ons. Choosing the right combination ensures a reliable, accessible, and compliant cable management system in commercial, industrial, or data center installations .
