

Cable trays on the company roof

Overview

Cable trays and cable tray supports provide an organized, easily accessible management solution for rooftop cable networks that can be adjusted to any height or width, routed around walkways and equipment, and configured for proper ventilation. The PHP Cable Tray Support is designed for cable systems of various widths at most specified heights above the roof surface. Layout isolation pads, (provided by contractor), according to the design and layout. Insert legs of duct support into bases and attach with 2-1/2" bolt and 1/2" nut. Traditionally, facilities have chosen to bundle cables and rig them up in a way that offers little protection, or run cables through a tube-like electrical conduit system, which make it. As buildings contain more and more devices and systems requiring structured cabling, the need for sturdy cable tray supports is growing. Our cable trays are produced in fit for purpose materials like stainless steel, galvanized, aluminium and fibreglass (FRP/GRP) composites to suit any project type both offshore and onshore.
