

How much does a temporary primary distribution box cost

Overview

Amazon.com: Temporary Power BoxPREMIUM CONSTRUCTION POWER DISTRIBUTION BOX: Crafted by WESTERN, the 6506TLSX Temp power box features a Temporary Power Dist.

Key Takeaways

Temporary primary distribution boxes typically cost between \$300 and \$2,500 depending on capacity, features, and portability.

Temporary power distribution boxes are designed to safely distribute electricity from a main source to multiple circuits, making them essential for construction sites, events, and emergency setups . Prices vary widely based on several factors: 1. Amperage and Voltage Capacity: Boxes with higher amperage (50A or more) and three-phase configurations are more expensive than standard 20A or single-phase units . 2. Number of Outlets and Circuit Breakers: Units with multiple outlets, GFCI protection, or integrated breakers cost more due to added safety and flexibility . 3. Enclosure and Portability: Weatherproof, NEMA-rated enclosures for outdoor use, or boxes with handles, wheels, or sled bases, increase the price . 4. Additional Features: Integrated meters, surge protection, and compliance with local electrical codes can add to the cost . Typical Price Ranges:

- Small portable units (single-phase, 20-30A, 2-6 outlets): \$300-\$600
- Medium units (30-50A, multiple outlets, GFCI protection): \$600-\$1,200

- Large or heavy-duty units (50A+, three-phase, multiple breakers, outdoor-rated): \$1,200–\$2,500 or more . Maintenance and Installation: While temporary boxes are designed for easy setup, regular inspection and maintenance are recommended to ensure safety and reliability . In summary, the cost of a temporary primary distribution box depends on capacity, safety features, portability, and environmental rating, with most units falling in the \$300–\$2,500 range. For precise pricing, suppliers like Platt Electric, Grainger, or Amazon offer product-specific listings .
