

How to calculate the dimensions for cable tray installation angle

Overview

Select the bend direction (vertical or horizontal), choose a preset angle ($30^\circ/45^\circ/60^\circ$) or enter measured height and distance manually, and the tool instantly outputs V-cut half width, full width, marking interval A, and a to-scale SVG fabrication diagram you can use with a. Select the bend direction (vertical or horizontal), choose a preset angle ($30^\circ/45^\circ/60^\circ$) or enter measured height and distance manually, and the tool instantly outputs V-cut half width, full width, marking interval A, and a to-scale SVG fabrication diagram you can use with a. The Cable Tray Slope & Fabrication Calculator is a field-ready tool for electrical construction workers who need to quickly calculate V-cut dimensions, bolt hole positions, slope length, and hanger spacing for inclined cable tray installations. Select the bend direction (vertical or horizontal). Calculate horizontal, vertical, or compound cable tray offsets based on bend angle, offset distance, and available installation space. The total tray section consumed = $2 \times$ single bend length. IEC 61537 covers cable tray and cable ladder systems for the support and accommodation of cables, while NEC Article 392 governs cable. How to calculate the size of the cut-out section (D) for a pre-determined angle set Eg. You have used your protractor and worked out you need to make a 22° angle in a 600mm cable tray. These determine the system's capacity to hold.
