

How to unplug the fiber optic cable to the home

Overview

After the OCA is fully drained, power down the OCA completely by following the instructions in this article.

Key Takeaways

To safely unplug a fiber optic cable, power down your devices, identify the connector type, and gently release the cable along its axis without bending or twisting it. Step-by-Step Instructions

1. Power Down Devices: Turn off your modem, router, and any connected devices to eliminate the risk of electric shock and prevent data loss during disconnection . 2. Clear Your Workspace: Ensure the area around your modem or ONT (Optical Network Terminal) is clean and free of clutter to avoid accidental damage . 3. Identify the Fiber Optic Cable and Connector: Fiber optic cables are thin and flexible, often labeled "fiber," "optical," or "FTTH." Common connector types include SC, LC, ST, and FC. SC connectors are square with a push-pull mechanism, while LC connectors are smaller with a clip or latch . 4. Handle the Cable Carefully: Avoid bending, twisting, or applying lateral force. Fiber optic cables are delicate, and excessive force can cause cracks or signal loss . 5. Disconnect the Cable:

- Stabilize the modem or ONT with one hand.
- For SC connectors, press the release tab and pull the connector straight out along its axis.

- For LC connectors, squeeze the latch and gently pull the connector straight out .
 - Stop immediately if you feel resistance to avoid damaging the cable or port.
6. Cap the Connectors: Place protective caps on any exposed fiber ends to prevent contamination or dust from entering the connector .
7. Inspect and Test: After reconnecting or replacing the cable, check your internet connection to ensure proper signal transmission. If the cable is damaged or stuck, contact your ISP or a certified technician .

Safety Tips

- Never look directly into the fiber end, as it may emit invisible infrared light.
- Work slowly and with controlled movements to protect the glass fibers.
- Avoid bending the cable sharply; loose coils are acceptable.
- If connectors are recessed or corroded, seek professional assistance . Following these steps ensures that your fiber optic cable is safely unplugged without damaging the cable, connectors, or your home internet equipment.
