

Huawei Data Center Cold Aisle Skylight Controller

Overview

Huawei ECC800 manages and monitors power usage and cooling in data centers and facilitates the management of all subracks within a rack enclosure, such as UPS, PDU, AC, and fan coils. It collects and analyzes operational data and enables collaborative security management. Skylights are classified as control skylights, rotating skylights, and flat skylights. Control skylights are installed on both ends of an aisle and used to install monitoring components such as the camera, multi-functional sensor, and smoke. The access actuator is the control component for the aisle door in a smart module. It connects to the ECC800 controller over FE port, wireless networking (802). The symbols that may be found in this document are defined as follows. Indicates an imminently hazardous situation which, if not avoided, will result in death. The Elevate Cold Aisle Active Opening Roof Skylight is designed to enhance modular containment cold aisle systems, providing an effective solution for maintaining optimal airflow and temperature control in Data centres. It's a modular-designed, highly integrated solution which comprises power supply, cooling, rack & structure, cabling and management system within a module, reliability and efficiency of power supply and cooling system.
