

Light armored optical cable with 4 cores

Overview

FIBERHOME GYTS-4B1 Outdoor Light Armor Single Mode Fiber Featuring light armor protection and 4 single-mode fibers, this cable ensures excellent durability.

Key Takeaways

A light armored 4-core optical cable is a robust fiber optic solution designed for outdoor and industrial applications, offering mechanical protection, environmental resistance, and high-speed data transmission. Structure and Components

A typical light armored 4-core optical cable contains four individual optical fibers housed within a protective armor layer. Key components include:

- Optical Fibers: Four single-mode or multi-mode fibers capable of independent data transmission, supporting duplex links or redundancy configurations .
- Loose Tube or Buffer: Gel-filled loose tubes or tight buffers protect fibers from moisture and mechanical stress .
- Strength Members: Steel wires or aramid yarn (Kevlar) provide tensile strength and prevent stretching during installation .
- Armor Layer: Light armor, typically corrugated steel tape or interlocking aluminum, shields the fibers from crushing, rodent damage, and environmental stressors .
- Outer Jacket: PE (Polyethylene) for outdoor UV and water resistance, or LSZH for indoor safety .

Applications

Light armored 4-core cables are suitable for:

- Outdoor Installations: Aerial, duct, and direct burial without additional conduit .
- Industrial and Harsh Environments: Roads, snowfields, construction sites, and pipelines .
- Telecommunications Networks: Backbone, FTTH access, LAN connections, and metropolitan networks .
- Security and Surveillance: CCTV systems and point-to-point links with redundancy .
- Performance and Advantages
- High Bandwidth Support: Compatible with 1G, 10G, 40G, and 100G networks .
- Temperature Range: Operates reliably from -40°C to $+70^{\circ}\text{C}$.
- Mechanical Protection: Armor layer ensures durability against crushing, bending, and environmental stress .
- Ease of Installation: Lightweight design allows overhead, pipeline, or direct burial deployment .
- Redundancy and Scalability: Two fibers can be used for active links while the other two serve as backups .

Summary

A light armored 4-core optical cable combines mechanical strength, environmental protection, and high-speed data transmission in a compact design. It is ideal for outdoor telecom, industrial networks, and security systems, providing reliable performance in harsh conditions while supporting future network expansion .
