

Photovoltaic AC combiner box with 3 inlets and 1 outlet

Overview

PV AC combiner boxes The new PV AC combiner boxes have been designed for PV systems with string inverters in trackers or PV AC Combiner Boxes | PV Distribu.

Key Takeaways

A 3-in-1-out PV combiner box combines three DC input strings into a single DC output while providing overcurrent, isolation, and surge protection for safe and efficient solar system operation. Overview

A 3-in-1-out combiner box is designed for photovoltaic systems where three separate solar panel strings need to be merged into a single DC output. This reduces wiring complexity and ensures that the downstream inverter or charge controller receives a consolidated, protected input . It is commonly used in residential, commercial, and medium-sized PV installations.

Key Features

- DC Input Protection: Each string typically has its own fuse or isolator switch, allowing safe disconnection for maintenance and overcurrent protection .
- Surge Protection: Integrated Type 2 SPD (Surge Protection Device) safeguards the system against voltage spikes caused by lightning or grid fluctuations .
- DC Load Disconnect: A manual or automatic DC isolator switch allows safe isolation of the output for maintenance or emergency shutdown .

- **Voltage Rating:** Common models support 1000V DC or 1500V DC, suitable for high-voltage PV arrays .
 - **Current Rating:** Fuse ratings should match the short-circuit current (Isc) of the PV modules to ensure proper protection .
 - **Weatherproof Design:** Most boxes feature IP65 or higher enclosures, making them suitable for outdoor installation and resistant to dust and water .
 - **Monitoring Options:** Some advanced models include real-time string monitoring, communication interfaces, and smart monitoring systems for performance tracking .
- Applications**
- **Residential Rooftop PV Systems:** Efficiently combines multiple strings for small to medium installations .
 - **Commercial PV Arrays:** Supports higher voltage and current requirements, with optional intelligent monitoring for large-scale systems .
 - **Outdoor Installations:** IP65-rated enclosures ensure durability in harsh weather conditions .

Selection Considerations

When choosing a 3-in-1-out combiner box, consider:

- **System Voltage:** Ensure compatibility with your PV array (1000V or 1500V DC).
- **String Current Rating:** Match fuses or breakers to the PV module specifications.
- **Isolation Needs:** Decide between manual isolators or DC circuit breakers.
- **Installation Environment:** Outdoor-rated enclosures (IP65 or higher) are recommended.
- **Compliance Standards:** Check IEC or UL certifications for safety and reliability .

Example Models

- **HS Series 3-in-1-out:** Includes DC fuses, Type 2 SPD, and DC load disconnect switch, suitable for 1000V systems .
- **EXCB3-DC3-1:** Features manual DC isolators for input and output, optimized for small to medium PV systems with enhanced safety and maintenance convenience .
- **LETOP 1000V Series:** Offers 1-16 string inputs and 1-3 outputs, with optional smart monitoring for commercial rooftop PV projects . A 3-in-1-out PV combiner box is essential for safe, efficient, and organized solar power distribution, providing protection against overcurrent, overvoltage, and enabling easy maintenance.
