

Price of Anti-Calling and Melting Tapered Type for Data Centers in Egypt

Overview

Egypt Data Centers Research Reports and Market Analysis18 comprehensive market analysis studies and research reports on the Egypt Data Centers sector, offe.

Key Takeaways

Estimated prices for specialized data center panels like Anti-Calling and Melting Tapered Type typically range from \$40 to \$360 per unit depending on material, manufacturing process, and supplier location. Cost Factors

- Material and Manufacturing Process
- Panels or cold plates made from stamped or brazed aluminum are generally the most cost-effective, starting around \$40 per unit for standard sizes and moderate thermal performance .
- Extruded aluminum with precision machining or friction stir welding increases durability and sealing performance, placing prices in the \$100-\$200 range .
- Fully CNC-machined solid plates or complex multi-layer structures can exceed \$360 per unit, reflecting higher labor, machining, and material costs .
- Local vs. Imported Supply
- Suppliers in Egypt may charge higher unit prices than Asian manufacturers due to smaller production volumes, higher labor costs, and import duties .
- Local sourcing can reduce lead times and logistics risk but may increase per-unit cost by 20-50% compared to bulk international orders.

- Panel Specifications
- Thermal performance, surface flatness, and interface requirements directly affect cost. Panels designed for high-power CPUs, GPUs, or AI servers require tighter tolerances and more complex flow channels, increasing price .
- Anti-Calling and Melting Tapered designs may involve custom tapering or anti-static coatings, which can add \$20-\$50 per unit depending on complexity.
- Volume and Demand
- Bulk orders for large data centers can reduce unit cost significantly. Small-scale or prototype orders are typically more expensive per piece due to setup and tooling costs .

Practical Guidance

- For budget planning in Egypt, expect basic stamped or extruded panels to cost roughly \$50-\$150 per unit, while high-end CNC or multi-layer panels may reach \$300-\$400 per unit.
- Always request quotes from multiple suppliers, specifying thermal requirements, dimensions, and tapering features to get accurate local pricing.
- Consider total cost of ownership, including installation, maintenance, and potential energy savings from improved thermal performance . By understanding these factors, data center operators in Egypt can make informed decisions on selecting Anti-Calling and Melting Tapered Type panels that balance performance, durability, and cost.
