

SC Fiber Optic Connectors for Surveillance Use

Overview

High temp fiber optics are used where the temperature is too hot for plastic fibers. Popular use in thermal process applications.

Key Takeaways

SC fiber optic connectors suitable for surveillance applications can operate reliably in temperatures from -25°C to $+150^{\circ}\text{C}$, offering a balance of durability, optical performance, and cost-effectiveness. Temperature Resistance

Standard SC connectors typically operate within -20°C to $+75^{\circ}\text{C}$ for active signal transmission, with storage limits from -40°C to $+85^{\circ}\text{C}$. Exceeding these ranges can cause mechanical deformation or optical performance degradation, which is critical in outdoor or industrial surveillance environments. For extreme conditions, specialized high-temperature SC interconnects can maintain stable performance up to 150°C , using advanced materials, temperature-resistant fiber coatings, and precision assembly techniques. These high-temperature connectors are ideal for mission-critical surveillance systems exposed to heat, rapid temperature changes, or industrial machinery.

Cost-Effectiveness and Performance

SC connectors are widely used due to their push/pull retention design, ease of installation, and compliance with standards such as EIA/TIA-604-3, IEC 61754-4, and Telcordia GR-326 CORE . They are available in simplex and duplex formats, supporting both multimode and singlemode fibers, which allows flexibility for surveillance networks with varying bandwidth requirements . Standard SC connectors provide low insertion loss (typically 0.15–0.5 dB) and high return loss, ensuring reliable signal transmission without excessive cost .

Harsh Environment Options

For surveillance systems in industrial or outdoor settings, HSC series SC connectors offer additional benefits:

- Operating temperature range: -25°C to +70°C (standard HSC), with high-temperature variants up to 150°C
- Flame-resistant materials meeting UL94V-0 standards
- Mechanical robustness with floating or rigid duplex designs for high-density installations
- Optimized end-face polishing for minimal signal reflection and stable optical performance These connectors provide a cost-effective solution for surveillance networks requiring durability, high optical performance, and compliance with industry standards.

Recommendation

For most surveillance applications, standard SC connectors are sufficient for indoor or moderate outdoor conditions. For high-temperature or industrial environments, investing in high-temperature SC interconnects ensures long-term reliability and minimal signal loss, making them a practical choice for mission-critical surveillance systems . Selecting connectors with field-terminable options can further reduce installation costs while maintaining performance .
