

Western European galvanized cable tray custom-made price inquiry

Overview

A cable tray is an assembly of units that have associated fittings that form a rigid structural system.

Key Takeaways

Custom-made galvanized cable trays in Western Europe are available with prices depending on material, size, surface treatment, and production method, typically ranging from competitive factory rates for standard hot-dip galvanized options to higher costs for fully customized solutions.

Customization Options
Western European manufacturers offer custom metal cable trays with a variety of options including width, depth, length, and surface treatment such as pre-galvanized or hot-dip galvanized finishes . Standard lengths are usually 2-3 meters, but trays can be produced up to 6 meters if required . Custom thicknesses and widths are also available, ranging from 25 mm to 200 mm in depth and 50 mm to 1000 mm in width .

Material and Durability

Hot-dip galvanized steel is commonly used for its corrosion resistance and durability, suitable for harsh industrial environments, outdoor installations, and high-load applications . Some manufacturers also offer stainless steel or wire mesh options for specialized requirements .

Pricing Considerations

Pricing depends on several factors:

- Tray type: Ladder, solid bottom, or wire mesh
- Length and dimensions: Longer or wider trays increase material costs
- Surface treatment: Hot-dip galvanizing adds to the cost compared to pre-galvanized options
- Custom features: Special bends, covers, or interlocking systems may increase price
- Quantity: Bulk orders often reduce per-unit cost For example, standard hot-dip galvanized ladder trays are priced per 2.4-meter section, with fittings priced per unit . Fully custom trays with specific dimensions or robotic-welded heavy-duty designs may be priced higher due to manufacturing complexity .

Manufacturers and Suppliers

Several Western European suppliers provide custom solutions:

- FEMICZ: Offers made-to-measure metal cable trays with multiple material and surface options .
- EAE Electric: Produces pre-galvanized and hot-dip galvanized trays with high structural durability, available in standard and extended lengths .
- JLH Electric: Specializes in hot-dip galvanized trunking with custom thickness, width, and length, supplied at competitive factory prices .
- VALDINOX: Focuses on wire mesh trays with fast installation systems and high production capacity, suitable for large-scale projects .

Recommendations

To obtain an accurate price:

- Specify dimensions (length, width, depth)
- Select material and galvanization type
- Determine quantity and any special fittings
- Request a quotation directly from manufacturers, as prices vary by customization and order volume By providing these details, suppliers can offer a tailored quotation reflecting both material and production costs, ensuring the solution meets project requirements efficiently.
