

What color should be used for optical cable markings

Overview

Fiber Optic Color Code: The Ultimate TIA-598-C Guide Since the earliest days of fiber optics, multimode cables have typically been color-coded orange, black.

Key Takeaways

Optical cables should be marked using standardized colors defined by the TIA-598-C/D standard, with specific colors for outer jackets, individual fibers, and connectors.

The outer jacket of a fiber optic cable indicates the fiber type and mode. Common standard colors include:

- Yellow: Single-mode fiber (OS1/OS2)
 - Orange: Multimode fiber (OM1/OM2)
 - Aqua: Multimode fiber (OM3/OM4)
 - Emerald Green: OM5 wideband multimode fiber
- These colors provide a quick visual reference for technicians to identify the cable type during installation and maintenance .

Individual Fiber Colors

Inside multi-fiber cables, each fiber is color-coded to allow easy identification. The 12-color sequence for individual fibers is:

- Blue
 - Orange
 - Green
 - Brown
 - Slate (Gray)
 - White
 - Red
 - Black
 - Yellow
 - Violet
 - Rose (Pink)
 - Aqua (Light Blue) For cables with more than 12 fibers, the sequence repeats in bundles, often with striped markings to distinguish repeated sets .
- Connector and Boot Colors

Connectors also use color coding to indicate polish type and fiber mode:

- Blue: UPC (Ultra Physical Contact) single-mode
 - Green: APC (Angled Physical Contact) single-mode
 - Beige: Multimode (OM1/OM2)
 - Aqua: Multimode (OM3/OM4) This ensures that connectors are easily matched to the correct fiber type and reduces the risk of misconnection .
- Benefits of Standardized Color Coding
- Error Reduction: Prevents mis-splicing and cross-connections in high-density cables
 - Operational Safety: Helps technicians quickly distinguish fibers and components
 - Global Consistency: The same color standards are recognized worldwide, facilitating international projects By following these standardized colors for jackets, fibers, and connectors, optical cables can be clearly marked, ensuring efficient installation, maintenance, and troubleshooting.
