

Which device should I connect the fiber optic panel to

Overview

Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled "ONT" or "Fiber"). There are endless ways to configure a fiber-optic network, but here are a few simple ways to add fiber to your existing network. A fiber media converter, also known as a fiber to Ethernet converter, allows you to convert typical copper Ethernet cable (e., Cat 6a) to fiber and back again. This cover protects the installation team while connecting your home to the new network and safeguards the exterior equipment from the elements long after installation day. ONTs are compact, typically measuring about the size of a hardcover book, and include LED indicators showing power, connection status, and data transmission activity.
